

EXP 02 : -Create a simple cloud software application for Flight Reservation System using any Cloud Service Provider to demonstrate SaaS.

Aim

To design, develop, and deploy a **cloud-based Flight Reservation System** and deliver it as **Software as a Service (SaaS)** so that users can search and reserve flights through a web browser without installing any software.

Application Overview

The **Flight Reservation System** is a web-based application that allows users to:

- View available flights
- Enter passenger details
- Reserve a flight online

The application is hosted on the cloud and accessed via a public URL, demonstrating the **SaaS model**.

Procedure

1. Requirement Analysis

Identified the need for a cloud-based Flight Reservation System that allows users to view available flights and reserve seats through a web browser.

2. Application Design

Designed a simple web interface with options to display flight details and collect passenger reservation information.

3. Application Development

Developed the application using **Python (Flask)** for backend processing and **HTML** for the user interface.

4. Cloud Platform Selection

Selected **Amazon Web Services (AWS)** as the cloud service provider to host the application.

5. Deployment Setup

Configured the cloud environment using **AWS Elastic Beanstalk** for easy deployment and management of the web application.

6. Application Deployment

Uploaded and deployed the Flight Reservation System on the AWS cloud, generating a public URL.

7. Testing

Tested the application by accessing it from a web browser, viewing flight details, and submitting reservation information.

8. Service Access Verification

Verified that the application could be accessed anytime through the internet without installing any software.

Output : -

The screenshot shows a web browser window for the Zoho Creator application. The URL is `creatorapp.zoho.in/krishnamrajasujith1101.ss/environment/development/flight-reservation-system#Form:User_Login`. The page title is "Flight Reservation system". The main content is a "User login" form with fields for Name (K.Raja Sujith), Email (kraja@gmail.com), Phone (+91 6785675678), and Password (raja123). A "Submit" button is at the bottom. On the left, there is a sidebar with "User login" selected. The status bar at the bottom shows the date as 20-01-2026.

The screenshot shows a web browser window for the Zoho Creator application. The URL is `creatorapp.zoho.in/krishnamrajasujith1101.ss/environment/development/flight-reservation-system#Report:User_Login_Report`. The page title is "Flight Reservation system". The main content is a "User login Report" table with one row showing data: Name (K.Raja Sujith), Email (kraja@gmail.com), Phone (+91 6785675678), and Password (raja123). The status bar at the bottom shows the date as 20-01-2026.

Name	Email	Phone	Password
K.Raja Sujith	kraja@gmail.com	+91 6785675678	raja123

Flight selection

From: chennai

To: Delhi

Route Preference: Long Haul

Flexible Date

Preferred Airline: Emirates

Preference Type: Direct Flight

Flight Class: Economy

Meal Option: Standard

Boarding Time: 20:45:31

Result

The **Flight Reservation System** was successfully developed and deployed on the cloud and delivered as **Software as a Service (SaaS)**.

Users were able to access the application through a web browser, view available flights, and reserve flights online, confirming the successful implementation of the SaaS cloud service model.
